RE: Engineering program for Fall 1993

The Engineering program for Fall 1993 is tentatively as follows:

Course Number and Title	Instructor
<b>Earthquake Engineering Program:</b>	
EE210-Introduction to Seismology	Dr. Mansour Niazi <sup>5</sup>
EE225-Dynamic Analysis of Structures	Dr. Guillermo Santana <sup>5</sup>
EE235-Finite Element Methods	Dr. Guillermo Santana <sup>5</sup>
EE244-Behavior & Design of R/C Structures	Dr. Michael Melkumian
<b>Industrial Engineering Program:</b>	
IE220-Organization Behavior	Dr. Michael Conrad <sup>10</sup>
IE225-Industrial & Commercial Data Systems	Dr. Vaughn Huckfeldt <sup>10</sup>
IE231-Deterministic Models in OR	Dr. Vaughn Huckfeldt <sup>10</sup>
IE265-Decision Analysis	Dr. Vaughn Huckfeldt <sup>10</sup>

The above program is tentative since Dr. Santana and Dr. Huckfeldt have not yet returned their contracts. I have not heard from Michael Melkumian either. In my estimation, there is very high probability that the above program will remain unchanged.

All classes will start on September 27. All courses will be taught over a 10 week period, except for EE210 which will be taught in an intensive pace over the first five weeks of the quarter.

The above classes are intended for the first year engineering students. Second-year (IE) students who do not have sufficient units to graduate should take IE225. They may also take IE220 if they have not taken it before. Those who have deficient GPA, may repeat a course (without extra credit) to improve their GPA's.

I will be arriving on July 30 and will bring with me other details regarding the instructors.
